Gravithy

H₂ based DRI/HBI for a competitive, functioning and decarbonized steel industry

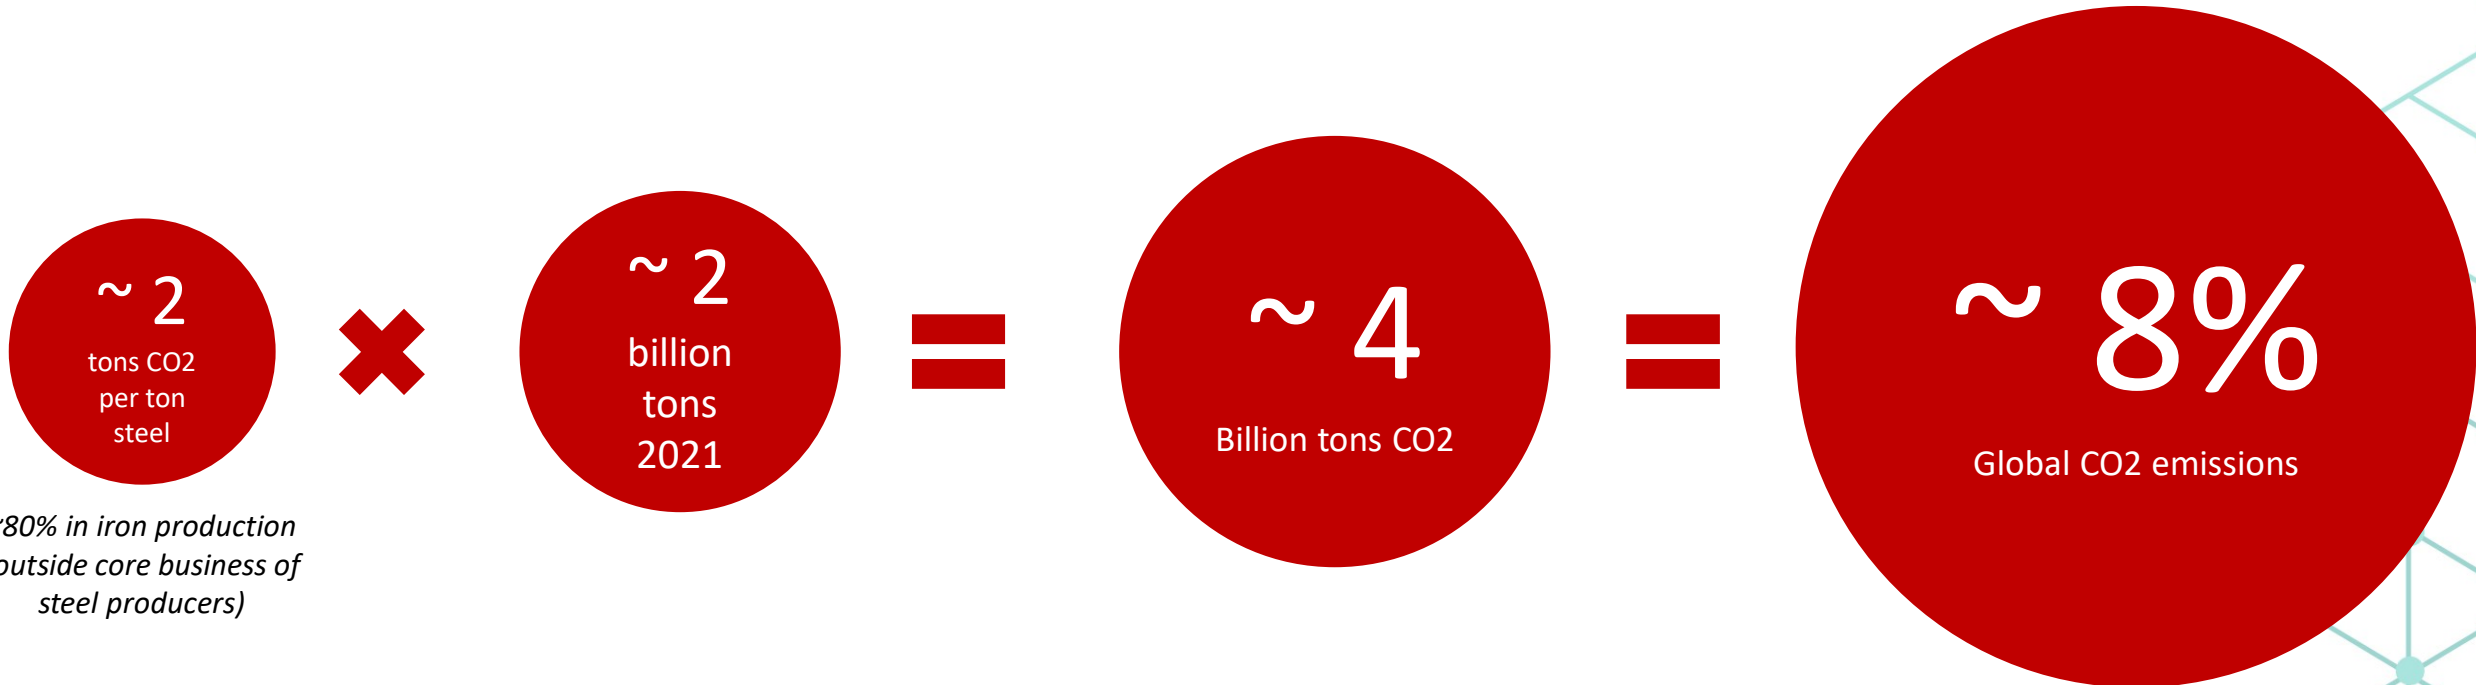

We need steel!

Steel is an enabler:

- Enabler of a circular economy
- Enabler of strong economic systems (mobility, energy, etc)
- Enabler of society well-being, national security and energy independence

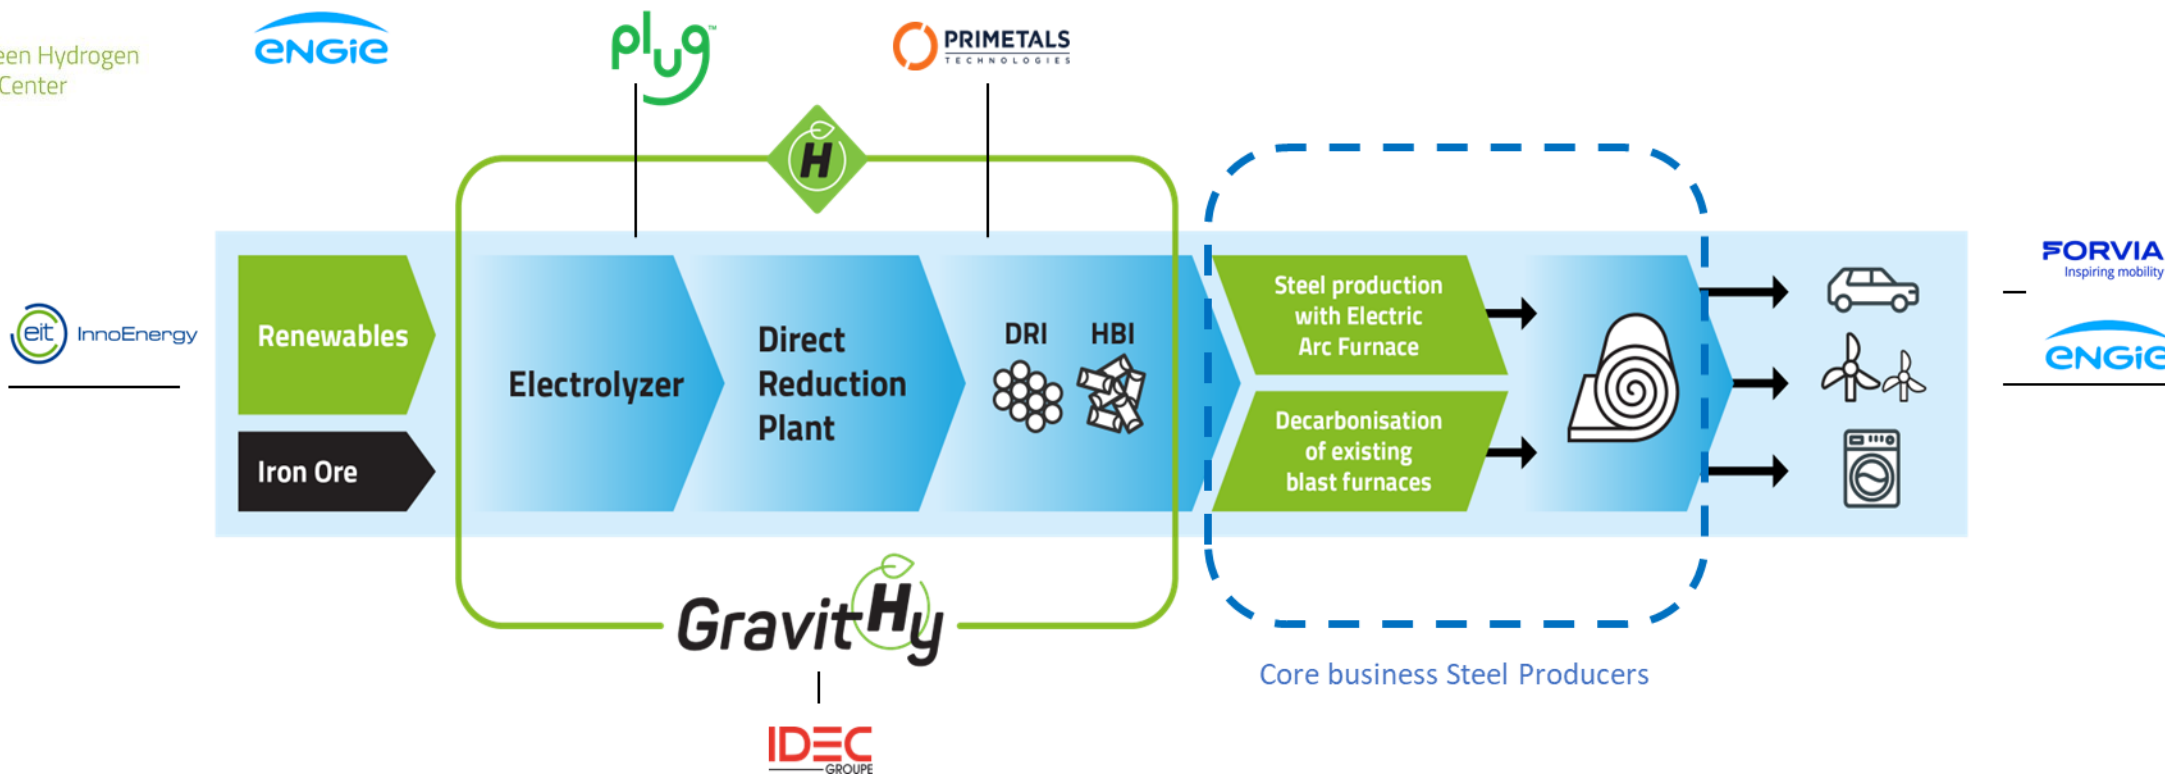

The industry accounts for ~8% of the global CO2 emissions. **Decarbonize steel production is key!**

The good news! Hydrogen is a proven solution to do the job and **GravitHy will lead the way.**

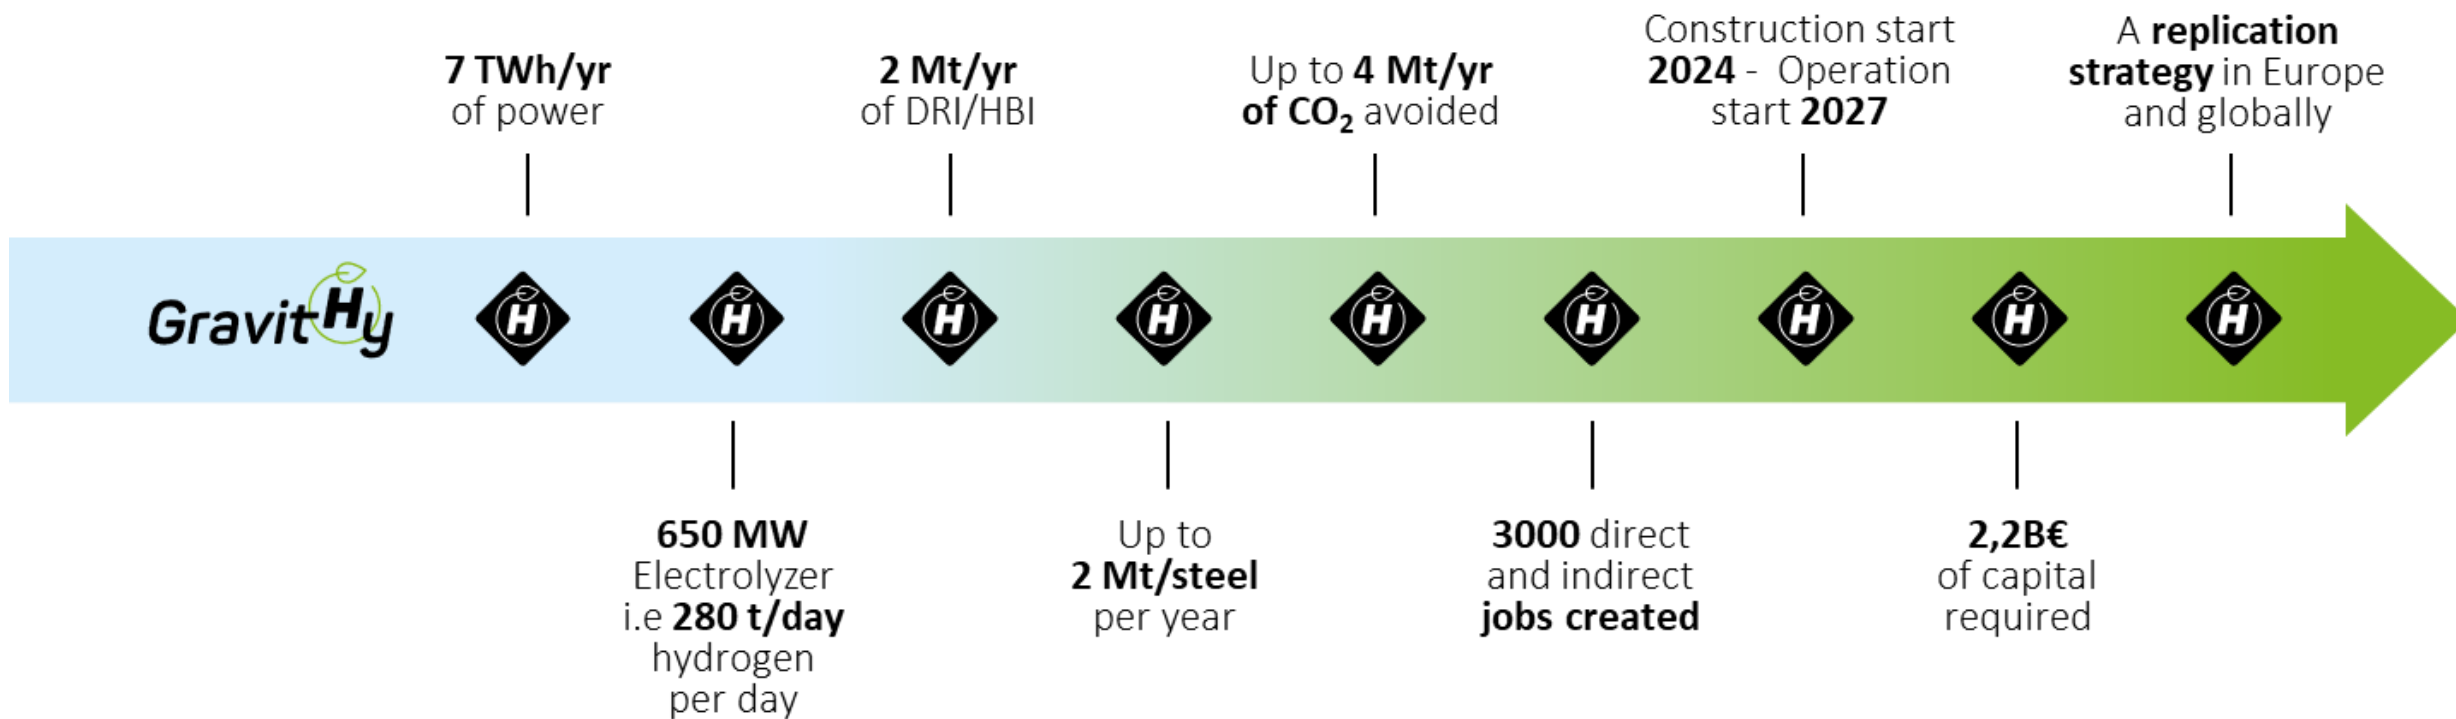

An **innovation in business model**, GravitHy uses H2 to **help steelmakers** to speed-up their green transition

EGHAC
European Green Hydrogen
Acceleration Center

The power of a value-chain approach! GravitHy is supported by a stellar consortium of shareholders and partners.

GravitHy plans to build and operate **H2 based DRI/HBI** plants. The **first** to be built in France

Availability of decarbonised electricity is a priority!

It is time to go beyond the pledges!

Gravithy is decarbonisation in action, relying on the power of collaboration and H₂ to feed the green industrial revolution

THANK YOU!

Dr. Jose Noldin
