Russia provides over a third of European gas supplies

Breakdown of EU gas supplies by source

Share of total volume in Billion cubic meters

3

Hydrogen plays a central role in Europe's strategy to reduce natural gas demand

European Commission targets for EU natural gas use by 2030, based on REPowerEU package Billion cubic meters (Bcm)

Source: BloombergNEF, European Commission, Eurostat. Note: LNG is liquified natural gas. EU's Russian Gas Phase-Out Hinges on Clean Energy (web | terminal).

4 October 24, 2022

REPowerEU has quadrupled Europe's hydrogen ambitions

REPowerEU hydrogen targets vs existing demand

Million metric tons

Required domestic electrolyzer capacity to meet domestic targets

Source: BloombergNEF

A mere 200 megawatts of electrolyzers were shipped in 2020

Estimate and forecast of annual electrolyzer shipments

GW

Electrolyzer sales doubled in 2021

Estimate and forecast of annual electrolyzer shipments

GW

October 24, 2022 7

Global electrolyzer markets are set to keep doubling

Estimate and forecast of annual electrolyzer shipments

GW

Global electrolyzer markets are set to keep doubling

Estimate and forecast of annual electrolyzer shipments

GW

China dominates electrolyzer deployment, followed by US and Europe

Leading markets for green hydrogen development in 2022

MW

Source: BloombergNEF. Note: Follows our optimistic forecast for 2022. Other Europe includes UK. SOE stands for Chinese state-owned enterprises. Sinopec, Three Gorges and Huadian are also SOEs.

Domestic hydrogen in Europe faces barriers

11 October 24, 2022

Domestic hydrogen in Europe faces barriers

Source: BloombergNEF

Domestic hydrogen in Europe faces barriers

Source: BloombergNEF

Definitions of clean hydrogen need to align

Hydrogen standard emission thresholds against production emissions only

Source: BloombergNEF. Note: CertifHY = A voluntary EU scheme for hydrogen certification. TÜV SÜD is set by a German technical certification company. GH2 = A voluntary standard by the Green Hydrogen Organization. SMR with CCS assumes a 90% capture rate. Emissions intensity of grid electricity in Germany at 349 grams CO2equivalent per kilowatt-hour. Values assume lower heating value (33.3kWh/kg) for hydrogen.

Pipelines from southern Europe or North Africa look competitive by 2030

Landed cost of hydrogen delivered from Spain to Germany, 2030: import versus domestic production

Source: BloombergNEF. Note: Assumes 2,000km pipeline transport form Valencia, Spain to Duisburg, Germany using a repurposed 48-inch pipeline operated between 80-60bar. Compressor stations every 500km along the pipeline. Local distribution distance is 50km using a repurposed 8-inch pipe operated at 7-3bar. Hydrogen is produced using western alkaline electrolyzers in both countries. Electricity from tracking solar PV is used in Spain, onshore wind in Germany.

15 October 24, 2022

Timing the conversion of gas pipeline infrastructure is a key challenge

Source: Bloomberg

Many countries have ambitions to ship hydrogen to Europe and Asia

Source: Bloomberg

The easiest way to ship hydrogen (H₂) is in the form of ammonia (NH₃)

Source: Vigor

Pipelines from southern Europe or North Africa look competitive by 2030

Landed cost of hydrogen delivered from Spain to Germany, 2030: import versus domestic production

Source: BloombergNEF. Note: Assumes ship transport to Germany over 20,000km from Australia, 6,500km from Canada, 12,000km from UAE and 18,000km from Chile.

19 October 24, 2022

Ammonia has only a limited number of direct-use applications

The prospects for widespread adoption of clean H₂ in various sectors

Source: BloombergNEF, concept from Liebreich Associates

See Hydrogen Economy Outlook (web) for detail.

Unavoidable sectors cannot decarbonize without using clean hydrogen.

High potential sectors need a low carbon price to adopt H_2 , or other methods of CO₂ removal cost more.

Medium potential sectors may find H_2 competitive in some circumstances.

Low potential sectors could use some H_2 under special circumstances.

Uncompetitive sectors have cheaper alternatives to cut CO_2 .

In some situations, green hydrogen can already be cheaper than gray H₂ today

Short-run marginal costs of ammonia production

\$/t-NH3 equivalent

Source: BloombergNEF. Note: Includes fixed and variable operating costs. Assumes captive H₂ production costs from 1H 2022 Hydrogen Levelized Cost Update (web | terminal) with no transport and storage costs. Ammonia costs in line with our report Hydrogen: Making Green Ammonia and Fertilizers (web | terminal). Excludes carbon prices for gray ammonia.

Many regions in the world are vying to supply Europe with hydrogen/ammonia imports

Annual electrolyzer forecast, global

BloombergNEF (BNEF) is a strategic research provider covering global commodity markets and the disruptive technologies driving the transition to a low-carbon economy.

Our expert coverage assesses pathways for the power, transport, industry, buildings and agriculture sectors to adapt to the energy transition.

We help commodity trading, corporate strategy, finance and policy professionals navigate change and generate opportunities.
